Source: Scopus; Accessed 08/2018.
Note: This table presents a publication volume-adjusted (volume of cited journal) ranking of journals that received the highest citations from the top 2 field journals in nine different fields of specialization. The nine fields used in this table are the same ones used in our analysis of work-history data and categorized in Table O-A9. Construction of the ranking proceeds in three steps. First, the top 2 journals in a field is defined as being composed of the two journals that received the highest rank within the field in Combes and Linnemer (2010)'s field-specific rankings (the column titled "Tier A Field" in Table O-A9 presents the top 2 journals by field). Second, publication volume-weighted proportions of outgoing citations from the top 2 field journals are calculated for each journal that received citations from articles published by the top 2 field journals in 2017, where the volume adjustment is made with respect to the yearly publication volume of the journals that received citations from the top 2 field journals. The proportions only use citations to articles published between 1996-2017 due to data unavailability for the pre-1996 period. Third, journals are ranked within a field based on field-specific outgoing proportions constructed in step 2. This table uses field-specific proportions constructed in Steps 1–3 to present the 10 journals that received the largest proportion of citations from the top 2 journals of each field.

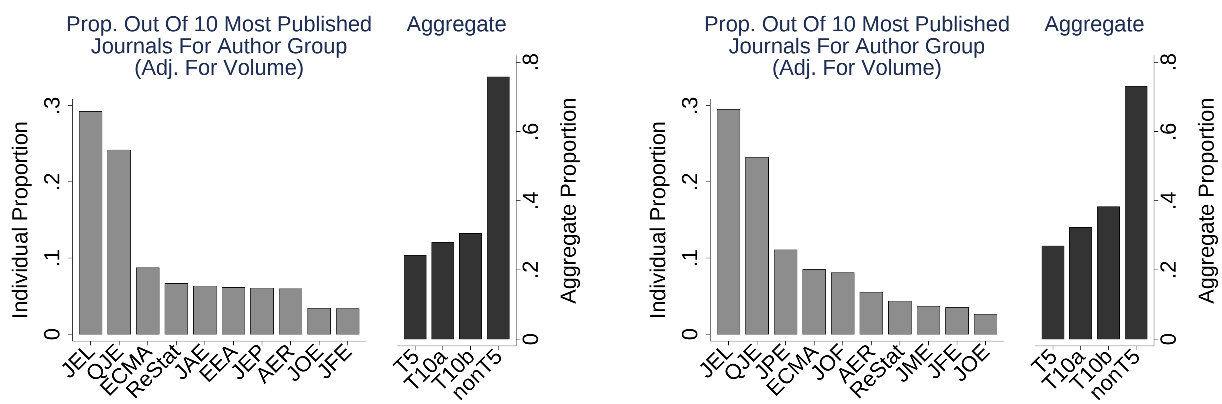
Label Legend: AEJae–American Economic Journal: Applied Economics; AEJep–American Economic Journal: Economic Policy; AEJma–American Economic Journal: Macroeconomics; AER–American Economic Review; AnnStat–Annals of Statistics; BPEA–Brookings Papers on Economic Activity; ECMA–Econometrica; EcT–Economic Theory; EctJ–Econometrics Journal; EctRev–Econometric Reviews; EctT–Econometric Theory; ExpEc–Experimental Economics; FoundTrFin–Foundations and Trends in Finance; GAMES–Games and Economic Behavior; HE–Health Economics; HtlhServRes–Health Services Research; IJGT–International Journal of Game Theory; IJIO–International Journal of Industrial Organization; JAE–Journal of Applied Econometrics; JASA–Journal of the American Statistical Association; JAccEc–Journal of Accounting and Economics; JBES–Journal of Business and Economic Statistics; JDE–Journal of Development Economics; JEG–Journal of Economic Growth; JEL–Journal of Economic Literature; JEMS–Journal of Economics and Management Strategy; JEP–Journal of Economic Perspectives; JET–Journal of Economic Theory; JFE–Journal of Financial Economics; JFQA–Journal of Financial and Quantitative Analysis; JFinInterm–Journal of Financial Intermediation; JFinMkt–Journal of Financial Markets; JHE–Journal of Health Economics; JHR–Journal of Human Resources; JInE–Journal of Industrial Economics; JLawEcon–Journal of Law and Economics; JMCB–Journal of Money, Credit and Banking; JME–Journal of Monetary Economics; JOE–Journal of Econometrics; JOF–Journal of Finance; JOLE–Journal of Labor Economics; JPE–Journal of Political Economy; JPub–Journal of Public Economics; QJE–Quarterly Journal of Economics; RAND–RAND Journal of Economics; RED–Review of Economic Dynamics; ReFin–Review of Financial Studies; ReStat–Review of Economics and Statistics; ReStud–Review of Economic Studies; SocChWelf–Social Choice and Welfare; WBER–World Bank Economic Review that once one adjusts for differences in publication volumes, the T5 journals account for a considerably smaller share of field-specific articles published by the T50 authors of each field. The difference across ranking methods stems largely from differences in rankings assigned to *AER*. The rank of the *AER* declines considerably. Rankings for the non-*AER* T5 journals are fairly stable across the ranking methods. Table 6 repeats the format of Table 5 except for a more recent time period of publication. The T5 fare a little better, but the non-T5 still dominate.

4.5 The Forgotten (by the Top 5) Classics

Figure 15: Proportion of RePEc's Most Cited Articles Published in Different Journals in the Last 10 and 20 Years (Adjusted for Publication Volume)

(a) Articles Published in Last 10 Years

(b) Articles Published in Last 20 Years



Source: RePEc.
The plot uses RePEc rankings for the top 1% of all economics articles over time to present the proportion of top cited articles that were published in different journals. Each subfigure is divided into an individual and aggregate journal section. The aggregate section presents the volume-adjusted proportions accounted for by (i) the T5, (ii) the T10a – the T10 according to Kalaitzidakis et al. (2003), (iii) the T10b – the T10 according to Kodrzycki and Yu (2006), and (iv) non-T5 journals. T10a includes the T5 and the Journal of Economic Theory, Journal of Econometrics, Econometric Theory, Journal of Business and Economic Statistics, and the Journal of Monetary Economics. T10b includes the T5 and the Journal of Economic Theory, Journal of Econometrics, Journal of Finance, Journal of Financial Economics, Review of Financial Studies. The labels in the horizontal axis correspond to: JEL-Journal of Economic Literature, QJE-Quarterly Journal of Economics, ECMA-Econometrica, ReStat-Review of Economics and Statistics, JAE-Journal of Applied Econometrics, EEA-Journal of the European Economic Association, JEP-Journal of Economic Perspectives, AER-American Economic Review, JOE-Journal of Econometrics, JFE-Journal of Financial Economics, JME-Journal of Monetary Economics.

where N^f is the total number of field f-specific articles published by field f's T50 authors over the period 1996–2010, $C^f_{j,y}$ is the total number of field f-specific articles published by field f's T50 authors in journal j during year y, $v_{j,y}$ is the total number of articles published by journal j during year y, and $V_y = \sum_{j \in \mathcal{J}} v_{j,y}$ is the total number of articles published during year y by all journals j that published articles by field f's T50 authors over the period 1996–2017.

The T5 excludes many influential papers. Figures 15a and 15b show that papers published in non-T5 journals account for more than 70% of RePecs most-cited articles in the past 10 and 20 years, respectively. Among the 20 most cited articles by RePEc, 35% were not published in the T5 (see Table O-A49). The most cited non-T5 papers reads like an honor roll of economic analysis (see Table 7, and Tables O-A47–O-A48). Many classics have appeared outside the T5. The T5 ignores publication of books. Becker's *Human Capital* (1964) has more than 4 times the number of citations of any paper listed on RePEc.[67] The exclusion of books from citation warps incentives against broad and integrated research and towards writing bite-sized fragments.

[67]See Table O-A50 for a sample of these neglected classics.

Table 7: 20 Most Cited Non-T5 Articles in RePEc's Ranking of Most Cited Articles

	Author	**Article Name** *Journal*	**Pub** ***Year***	**RePEc** ***Rank***	**RePEc Cites**
1.	Lucas, R. J.	"On the Mechanics of Economic Development" *Journal of Monetary Economics*	1988	5	4,249
2.	Blundell, R., Bond, S.	"Initial conditions and moment restrictions in dynamic panel data models" *Journal of Econometrics*	1998	6	4,195
3.	Jensen, M., Meckling, W.	"Theory of the firm: Managerial behavior, agency costs and ownership structure" *Journal of Financial Economics*	1976	7	4,145
4.	Johansen, S.	"Statistical Analysis of Cointegration Vectors" *Journal of Economic Dynamics and Control*	1988	8	3,939
5.	Bollerslev, T	"Generalized autoregressive conditional heteroskedasticity" *Journal of Econometrics*	1986	9	3,876
6.	Arellano, M. Bover, O.	"Another look at the instrumental variable estimation of error-components models" *Journal of Econometrics*	1995	15	3,087
7.	Fama, E. French, K.	"Common risk factors in the returns on stocks and bonds" *Journal of Financial Economics*	1993	19	2,760
8.	Calvo, G.	"Staggered prices in a utility-maximizing framework" *Journal of Monetary Economics*	1983	23	2,576
9.	Im, K. S Pesaran, H. Shin, Y.	"Testing for unit roots in heterogeneous panels" *Journal of Econometrics*	2003	25	2,487
10.	Charnes, A Cooper, W. Rhodes, E.	"Measuring the efficiency of decision making units" *European Journal of Operations Research*	1978	28	2,438

Note: Ranking and Citation Source: RePEc. Accessed on: 05/19/2017

In subfield after subfield this pattern is repeated. Truly innovative papers often do not survive the gauntlet of mainstream refereeing and editing that feature "normal science" and not "novel science."
